The AI Act is a Gamechanger for the global Tech-Industry and a huge challenge for companies.

The European Parliament is currently elaborating a legal framework for the use of trustworthy AI. Companies should start informing themselves about the upcoming restrictions now.

WHO IS CONCERNED?

- Companies offering AI systems on the European market
- Companies whose AI system is used by European users
- Companies whose AI generated output is used within the EU

WHAT NEED COMPANIES TO DO?

- Identify affected AI, classify risk levels & check compliance
- Adaption of launched & planned AI systems according to the legal framework
- Implementation of additional requirements, e.g., establishment of risk management system

WHY DO WE NEED THIS REGULATION?

- Ensure ethical & trustworthy use of AI systems
- Protection of fundamental human rights & consumer rights
- Worldwide first legal framework for AI – with global impact

HOW WILL AI BE CLASSIFIED?

- The requirements to be fulfilled result from the respective risk level of an AI system
- The classification is based on seven key principles

- **(Technical) robustness & safety**
- **Accountability**
- **Privacy & Data Governance**
- **Human agency & Oversight**
- **Transparency**
- **Diversity, non-discrimination & Fairness**
- **Societal & environmental well-being**

- Rule of thumb: the higher the risk, the more comprehensive the requirements to be met

WHY SHOULD I START NOW?

- Non-compliance can result in fines up to 40,000,000 € or 7% of companies' annual worldwide turnover
- Avoid potential loss of sales, e.g., due to decommissioning

HOW WE MAY HELP YOU

- ✓ Conformity assessment & adaptation of your AI algorithms
- ✓ Design & development of a custom-fit AI Act Risk & Compliance System
- ✓ Preparation & support for registration of high-risk systems
